

**What do all those rating numbers mean to me?**

**The federal government requires all air conditioning and heating equipment to be rated as to efficiency. The higher the rating, the more efficient the model. For cooling, the rating is SEER (Seasonal Energy Efficiency Rating); heat pump heating is HSPF (Heating Seasonal Performance Factor) and gas furnaces are rated with AFUE (Annual Fuel Utilization Efficiency). The experts at Arthur Air Conditioning will be glad to assist you with efficiency rating comparisons. You may also contact your utility provider or reference the ARI Directory for information.**
